

Typography

The Land Use Labs type system, for print and for web. Every size, weight and leading value in one place, set at actual size so the proportions can be judged rather than calculated. Space Grotesk sets display and data. Inter sets body and interface.

Rules that travel with the scale

Space Grotesk is for display and data only. Headings, card titles on content cards, stat numerals, chart figures. It never sets running text. Its letterforms are distinctive enough to carry a brand and wrong enough to fatigue a reader across ten thousand words.

Inter carries everything below H3 in print, H4 and below on web. The split point differs because web headings do less reading work than print ones.

Two weights per face, and 700 is the ceiling. Space Grotesk's variable axis runs 300 to 700, so there is no Black or Extra Bold to specify. Display uses 700, with 500 reserved for oversized treatments. Inter uses 400, 500 and 600. Anything wanting more presence gets more size, not more weight.

All numerals tabular. Tables, stat bands, chart labels, folios. Space Grotesk ships tnum for this. Proportional figures only in running prose, and the slashed zero stays off since it reads as technical rather than editorial.

Print scale

For 8.5 × 11 reports at a 5.5in measure, about 72 characters per line.
Leading is given as a multiplier; the point value follows in the table.

PART TITLE · SPACE GROTESK 700 · 34 / 1.08

How the Kansas City Metro Zones

H1 · SPACE GROTESK 700 · 17 / 1.25

Finding #2: Zoned land predominantly favors single-family housing

H2 · SPACE GROTESK 700 · 14 / 1.30

Rising costs, unevenly borne

H3 · INTER 600 · 11 / 1.35

Minimum lot size requirements

BODY · INTER 400 · 11 / 1.50

Like most other CBSAs in the database, zoned land in the Kansas City metro predominantly allows residential uses. Just 5% is classified as Nonresidential, which includes uses such as airports or industry.

PULL STAT · SPACE GROTESK 700 · 18 / 1.30

44% of renter households in the metro are cost burdened.

CAPTION · INTER 600 LABEL + INTER 400 · 9 / 1.40

FIGURE E: Permitting pathways for different housing types on residentially zoned land.

FOOTNOTE · INTER 400 · 8.5 / 1.40

1 American Community Survey, 5-year estimates, 2000 and 2024.

Card titles

Cards are scanned in parallel rather than read in sequence, so their titles are a separate concern from headings. The card's role decides the face: content cards take Space Grotesk, control cards take Inter, because a control card sits inside a flow where everything else is already Inter.

Tier	Used on	Face	px	Leading
Card title L	Product grid, resource grid	Space Grotesk 700	21	1.25
Card title M	Comparison grid, content cards	Space Grotesk 700	18	1.30
Card title S	Scope cards, in-flow controls	Inter 600	16	1.35
Card eyebrow	Format tag, category label	Inter 600	12	1.20
Card body	All tiers	Inter 400	14	1.50
Card link	Learn more, Access resource	Inter 600	15	1.35

Card titles never take the display step. A grid of six cards at 56px would compete with the page headline above it. Card title L is deliberately the same size as H3, so a card reads as a peer of a sub-section rather than a rival to the page title.

Card body drops to 14px, not 16px. Card text is a summary the reader scans before deciding to click, not a paragraph they settle into. Running it at full body size makes a grid of cards feel heavier than the page it sits on.

CTA type

Type specifications for calls to action and links. Sizes are web values, shown here near actual size. Containers appear in the specimens for legibility only; how a CTA is filled, outlined, or spaced is a components question, not a type one.

Rules

Sentence case, with proper nouns intact. Capitalise the first word only, then anything that is a name. **Order Slices** and **Download Data Dictionary** keep their capitals because Slices and Data Dictionary are named things. **Download sample**, **Get instant pricing** and **Learn more** do not. No Title Case, no ALL CAPS. The eyebrow is the only uppercase element in the system.

No arrows. No CTA label carries a trailing arrow, chevron, or caret. The label is words only.

Primary and secondary are one type specification. They are distinguished by fill, not by size. Making the secondary smaller would imply the optional action is also harder to read, which is a different and worse message than "this one is optional."
